

SYSTEMS AND METHODS FOR DELIVERING AND GATHERING MEDICAL DIAGNOSTIC DATA

ABSTRACT OF THE DISCLOSURE

Systems and methods for delivering and gathering medical diagnostic data. In some cases, the methods include receiving a data set originating from an implantable medical device and identifying a review group associated with data set. The review group can include one or more members that can be, for example, versed in providing medical diagnosis based at least in part on information derived from implantable medical devices. The data set originating from the implantable medical device is communicated to at least one member of the review group, and an analysis of the data set is received from the at least one member of the review group.
